

# TEFLON PIN RETAINERS

Teflon Pin Retainers (TPR's) take the place of circlips in some Powroll piston kits.

These retainers work well for high rpm applications, removing the possibility of clip

failure.

Installation is simple, just press into place until seated completely in the pin. The shoulder will lightly touch cylinder wall when installed.

TPR's need to be perfectly clean, and installed in a clean bore to avoid damage to the cylinder.

Follow Powroll bore kit instructions for details on cleaning parts before assembly.
